Kingston Clinical Update

Radiology Services

“Our Radiology Department is largely based on the Kingston Hospital site, but we also provide services at Surbiton Health Centre and Raynes Park.

We provide a comprehensive imaging service to both primary and secondary care colleagues, within a multi-disciplinary team, which is Consultant led.

Currently we are working on redeveloping the Kingston Hospital site to enable us to keep pace with the new technology available within our speciality. This will facilitate better patient experience and improved diagnostic capability.”

Dr Vin Majuran - Clinical Lead for Radiology

Emergency Department Changes and Winter Pressures

Our A&E department is exceptionally busy and we are seeing a high number of acutely ill patients. To help us ease the pressure on A&E, we would appreciate your support by signposting your patients to other health services. Please find information to signpost the patient in the link below.

Acute Paediatric Surgical Pathways

The acute paediatric surgical pathways in south west London have changed to reflect the regional centralisation of paediatric surgical services, expertise and training. The surgical team at Kingston no longer accepts children under 5 and all acute surgical referrals are transferred to the paediatric surgery at St George’s Hospital, even if they present initially to the emergency department here at Kingston. If you have a child under the age of 11 years with a suspected acute surgical abdomen, please make a direct referral to the paediatric surgery at St George’s Hospital.
